

Name: Aian Jae S. Garcia

Section: BSIT - 3A

Lab 1.1.3

Part 1: Conduct a Penetration Tester Job Search

Table 1: Jobs Table

Job Title	Company Name	Level(Entry, Mid, Senior)	Location
Vulnerability Assessment and Penetration Testing (VAPT) Specialist	TechTiera Corp	Mid & Senior	Pasig
Penetration Tester	Next Generation Technologies Global Inc.	Mid	Marikina
Cyber Security Analyst	Actionlabs IT Services	Mid	Pasay
Security Engineer	MEC Networks Corporation	Mid	Quezon
SOC Analyst	Abacode	Mid	Clark Freeport Zone

Part 2: Analyze Penetration Tester Job Requirements

Table 2: Duties and Required Training and Certification

Job Title	Duties	Required Skills	Required Experience
Vulnerability Assessment and Penetration Testing (VAPT) Specialist	Vulnerability assessment and penetration testing to host, server, workstation, network devices, web application, web api,	Bachelor's Required	VAPT (3 Years)

	source code, mobile application, wireless device, software application, in-house application, cloud security, and security tool Documentations and generation of VAPT reports, periodic reports, and relevant documents Providing support to cybersecurity and non-cybersecurity groups in relation to vulnerability assessment and penetration testing Participation in Threat Exposure and Attack Surface Management project initiatives		
Penetration Tester	Conduct and/or support mobile penetration testing on enterprise network assets. Prepare reports that identify technical and procedural findings and provide recommended remediation strategies/solutions. Perform technical (evaluation of technology) and non-technical	Advanced understanding of security concepts and security best practices Understanding and familiarity with common code review methods and standards Experience with performing penetration testing and risk assessments against computer networks Background with	VAPT: 2 years

	(evaluation of people and operations) risk and vulnerability assessments of relevant technology focus areas (e.g., local computing environment, network and infrastructure, enclave boundary, supporting infrastructure and applications). Capture and analyze network traffic associated with malicious activities using network monitoring tools. Make recommendations regarding the selection of cost-effective security controls to mitigate risk (e.g., protection of information, systems and processes). Effective security event analysis and pattern identification. Use cyber defense tools for continual monitoring and analysis of system activity to identify malicious activity. Monitor external data sources (e.g., cyber defense	Qualys, Tenable and OpenVAS Vulnerability Scanners Problem Management skills Familiar on different security and frameworks such as CIS, COBIT, ISO 17799 and 27001, NIST SP800 53, ITIL v2, HIPAA, FFIEC, NERC CIP, PCI DSS, OWASP Advanced Windows knowledge Advanced Network knowledge in Infrastructures such as VPN, LAN, WAN, wireless network, network topologies, and access methods. Hardware such as switches, routers, media types. Protocols and services such as OSI model, IPv4, IPv6, name resolutions, networking services, TCP or IP Security fundamentals Types of threats, attack vectors Network vulnerabilities and attacks	
--	--	--	--

	vendor sites, Computer Emergency Response Teams, Security Focus) to maintain currency of cyber defense threat condition and determine which security issues may have an impact on the enterprise. Provides cybersecurity recommendations to leadership based on significant threats and vulnerabilities. Provide technical summary of findings in accordance with established reporting procedures. Perform timeline analysis.	User authentication, permissions, password policies, audit policies, encryption, cryptography Physical security, internet security, wireless security, and core security principles Familiarity of security tools, technologies and threat landscape. Amenable to deploy in Ortigas and Makati area.	
Cyber Security Analyst	Monitor security alerts, event logs, and system activities across critical infrastructure for suspicious, malicious, or unauthorized behavior. Utilize security monitoring tools and established procedures to analyze network traffic, endpoint activity, and system events.	Bachelor's degree in Information Technology, Computer Science, Cybersecurity, or a related field. Experience in cybersecurity operations, security monitoring, incident response, or vulnerability management is preferred. Familiarity with security tools such as	N/A

	Investigate alerts and correlate logs to identify potential cybersecurity threats, anomalies, or breaches. Escalate identified security risks and incidents based on severity and impact. Investigate, document, and respond to information security incidents in coordination with internal teams and external stakeholders. Support incident containment, eradication, and recovery activities to minimize operational impact. Conduct root cause analysis and assist in implementing corrective and preventive actions. Apply remediation activities and fixes as directed by the Lead Cybersecurity or Security Operations Lead. Assist in conducting vulnerability assessments, scans, and penetration	SIEM, endpoint protection, vulnerability scanners, and network monitoring tools. Knowledge of networking, operating systems, firewalls, and cybersecurity best practices. Understanding of common cybersecurity frameworks and standards is an advantage. Strong analytical, troubleshooting, and problem-solving skills. Good communication and documentation skills.	
--	--	---	--

	testing activities. Perform routine security reviews and assessments of servers, applications, databases, endpoints, and network devices. Track identified vulnerabilities and support remediation and patch management activities. Recommend mitigation measures to address security gaps and reduce exposure to threats. Assist in the development, implementation, and maintenance of cybersecurity policies, standards, procedures, and guidelines. Support compliance initiatives related to information security and regulatory requirements. Participate in security awareness and best practice initiatives when required. Evaluate and		
--	---	--	--

	recommend security tools, technologies, and controls to strengthen system security and hardening. Stay updated on emerging cybersecurity threats, vulnerabilities, attack techniques, and industry trends. Participate in security reviews and risk assessments for new systems, applications, and infrastructure projects. Provide recommendations on appropriate security controls and risk mitigation strategies. Perform other duties and responsibilities as assigned.		
Security Engineer	Responsible to monitor security systems and networks for suspicious activity and stay up-to-date on the latest threat intelligence. Conduct vulnerability assessments and recommend mitigation measures.	Graduate of BS Information Technology, Computer Science, and Computer Engineering from any reputable school. Must have 3-5 years work experience as Security Engineer, SOC Analyst or any related.	N/A

	Responsible to investigate security incidents and respond to threats and analyze security alerts and determine their validity. Responsible for troubleshooting network issues, identify root causes, and implement solutions.	Must have experience with security information and event management (SIEM) systems. Must be knowledgeable of ethical hacking and penetration testing (preferred). Relevant certifications such as Fortinet Certified Professional - Network Security, Fortinet Certified Solutions Specialist, Aruba Certified Switching/Mobility Professional or other industry-recognized certifications are highly desirable. Must be willing to work on-site in Cubao, Quezon City	
SOC Analyst	Perform security event monitoring using Security Information and Event Management (SIEM) from multiple sources, including but not limited to, events from network and host-based intrusion detection/prevention systems, network infrastructure logs, systems logs, applications, and databases.	Has knowledge of the following systems and technologies: SIEM (Security Information and Event Management) TCP/IP, computer networking, routing, and switching IDS/IPS, penetration and vulnerability testing Firewall and intrusion detection/prevention protocols	

	Investigate intrusion attempts, differentiate false positives from true intrusion attempts, and perform analysis of exploits. Proactive monitoring and response of known and/or emerging threats. Carry out Thrive's information security strategy both internally and externally for 400+ clients in the northeast. Analyze data from our SOC and SIEM and determine if further analysis is needed. Work within Thrive's security standards and best practices and recommend future enhancements. Manage our clients security awareness training to help their end users be as safe as possible. Analyze vulnerability scans and determine remediation steps Stay abreast of security events and techniques to keep	Windows, UNIX, and Linux operating systems o Network protocols and packet analysis tools EDR, Anti-virus, and anti-malware Content filtering Email and web gateway. Understanding of cybersecurity threats, and experience with incident response standards and procedures. Demonstrates comprehension of good security practices Professional experience in a system administration role supporting multiple platforms and applications Ability to communicate network security issues to peers and management Ability to analyze a large amount of data from various sources and use this information to solve complex problems and make good decisions. Must be able to work	
--	---	--	--

	our clients protected. Build awareness through training and education.	effectively in a team environment and collaborate within the team and other stakeholders. Computer Networking & Security Vulnerability Discovery and Analysis Operating System Internals Familiarity with TCP/IP network protocols, application layer protocols (e.g., HTTP, SMTP, DNS, etc.). Excellent Written and Verbal Communication Skills Preferred Skills: Knowledge of common Windows and Linux/Unix system calls and APIs Understand Anti-Virus Knowledge of programming languages. Knowledge of internal file structures for file formats commonly associated with malware (e.g., OLE, RTF, PDF, EXE, etc.)	

Part 3: Discover Resources to Further Your Career

- a. Which certifications are most commonly required?
 - VAPT, Fortinet Certified Professional - Network Security, Fortinet Certified Solutions Specialist, Aruba Certified Switching/Mobility
- b. Investigate training options for the certifications that you identified as being appropriate to the prospective positions. Where can you take courses to prepare you for those certifications?
 - CompTIA, Fortinet, and HEP (Hewlett Packard Enterprise)

Reflection

1. Do you find that jobs are concentrated in any one area, or are they distributed?
 - They are distributed. Different companies require these jobs for testing and security.
2. What are the most common duties mentioned?
 - Majority are vulnerability assessment and penetration testing, some also include proactive security monitoring, and documentations
